

Jerry Sisemore

Former Philadelphia Eagles
Tackle

While I was in the NFL, I made a lot of tackles...

But tackling prostate cancer with HIFU was the only one that really mattered.

While Super Bowl Sunday wraps up football season, prostate cancer season is year-round. Take a page out of Jerry Sisemore's playbook and attack prostate cancer head-on with HIFU!

Performed in an outpatient setting, High Intensity Focused Ultrasound (HIFU) is a precise, targeted therapy that:

- Preserves sexual and urinary function
- Decreases PSA levels by 95% with up to 10 years of no cancer recurrence
- Can be used as a first line of treatment *AND* a salvage therapy
- Requires *no surgery, chemo or radiation*

HIFU significantly decreases the risk of impotence from 80% to 2%, and incontinence from 20% to .4%.

Dr. George Suarez, board-certified urologist, is the world's leading HIFU expert with more than 15 years of experience and over 2,300 procedures performed.
